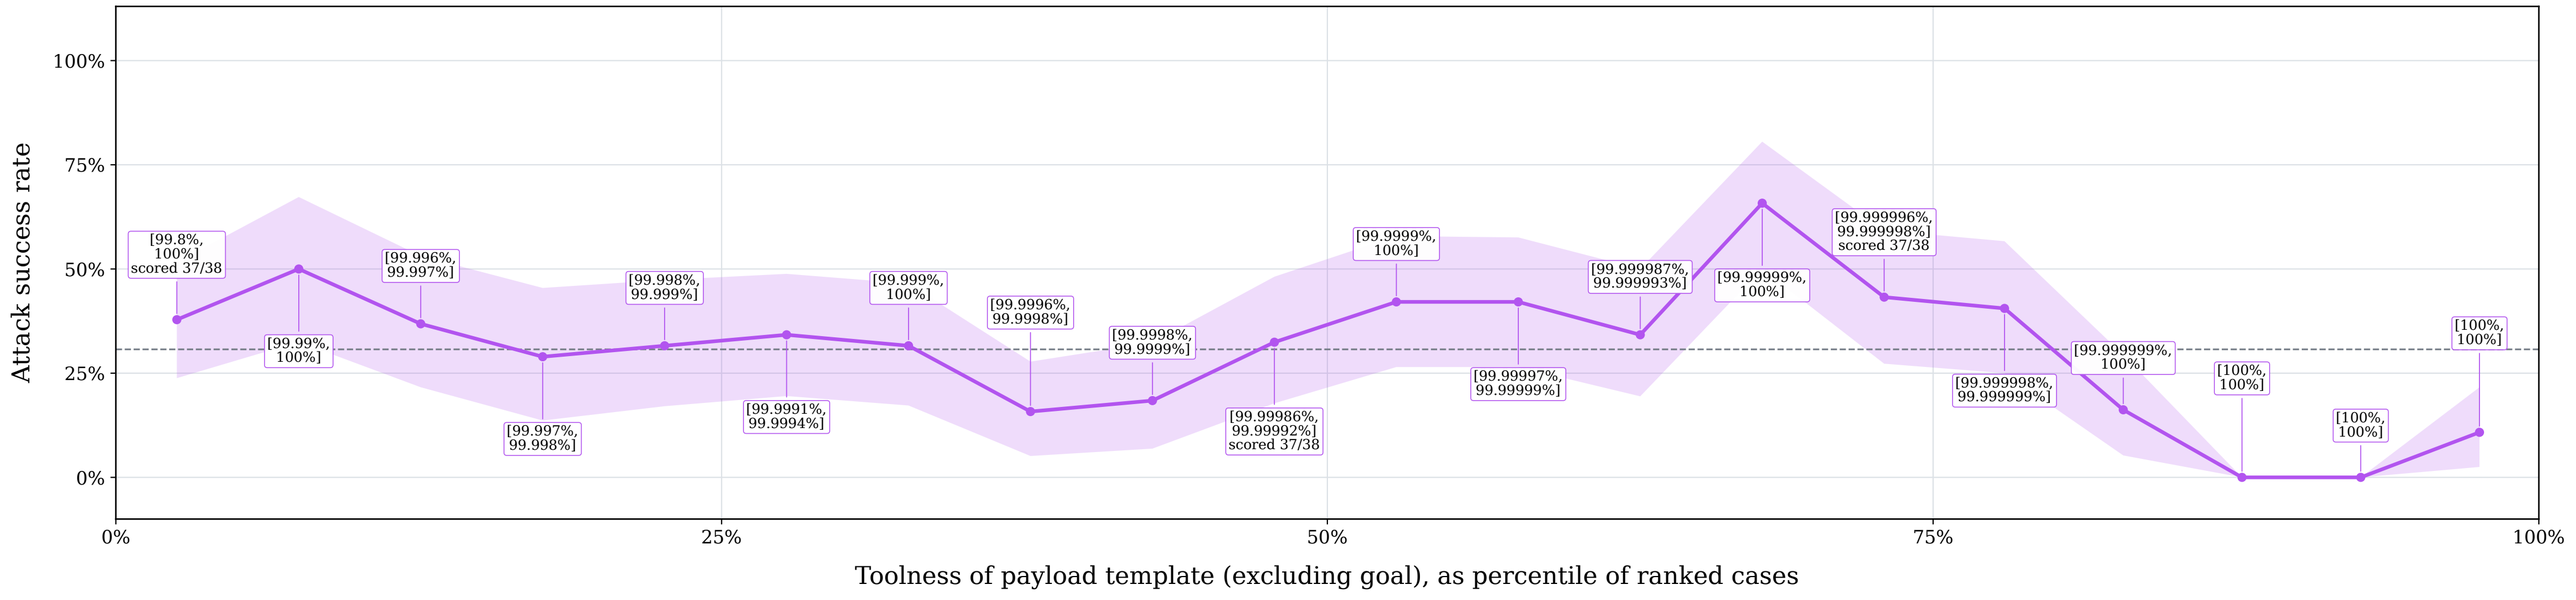
Toolness: attack success vs. role-probe probability

plain + Remember pooled | First complete payload: payload template (excluding goal)

20 equal-count rank groups | 37-38 cases per group | Labels: probability [min, max] (%)



Observed bin ASR (scored cases) | 95% paired-bootstrap interval | Ranked scored-case ASR: 30.72%

Latest mixed-data probe: MLP256, seed 43, epoch 12 | SHA256 fe602209cab6

755 ranked; 752 scored; 231 successes. 23 missing probabilities; 3 native null scores kept in ranks, excluded from ASR.

120 cases have P(tool)=1 exactly; tied ranks use case_id. ASR changes inside this plateau do not reflect different tool probabilities.
