4×10^{-1}
6×10^{-1}
10^{0}
Adjusted odds ratio per +10 probability-percentile points
95% cluster-robust CI; 56 user-task clusters. Red: BH q < 0.05 across 12 tests; blue: q >= 0.05.
752 scored cases. Same user task's injection cases and both payload conditions share a cluster.
Odds ratios describe association, not ASR ratios or causal effects. Identical probabilities receive identical average ranks.
