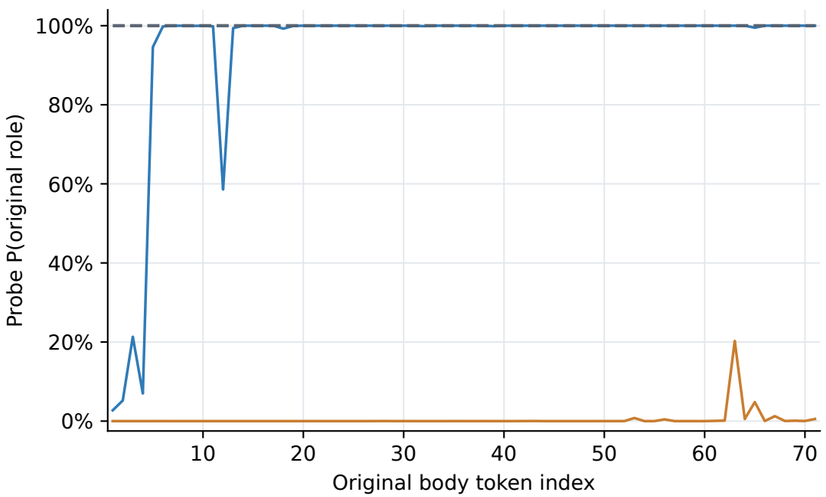
Where within a body does the original-role probability change?

Single native benign trace: slack/user_task_7 | Every body token shown

Original
Tags removed
Block moved

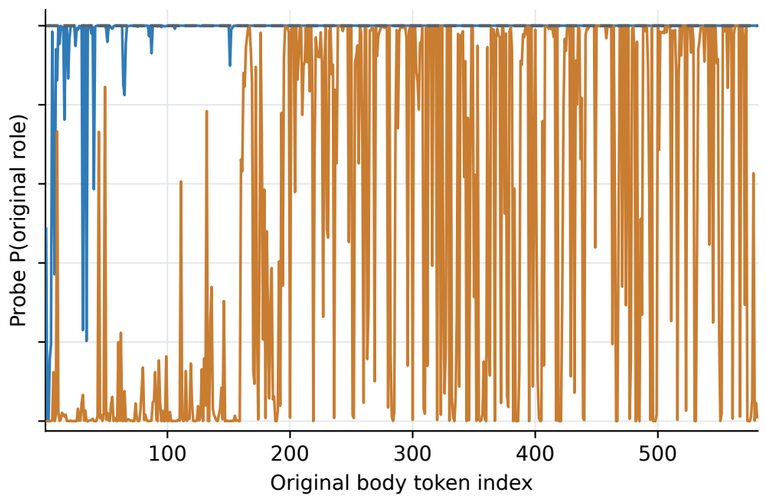
System · 71 body tokens

Means: original 100.0% | removed 94.2% | moved 0.4%



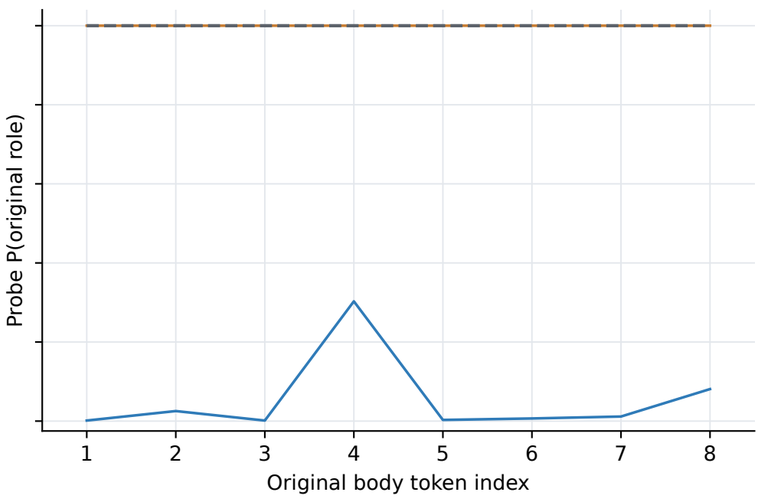
Developer · 581 body tokens

Means: original 100.0% | removed 98.5% | moved 50.4%



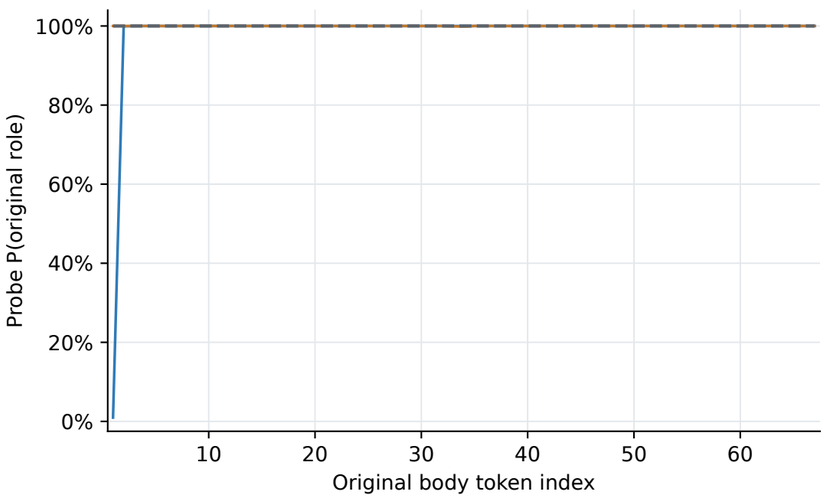
User · 8 body tokens

Means: original 100.0% | removed 5.4% | moved 100.0%



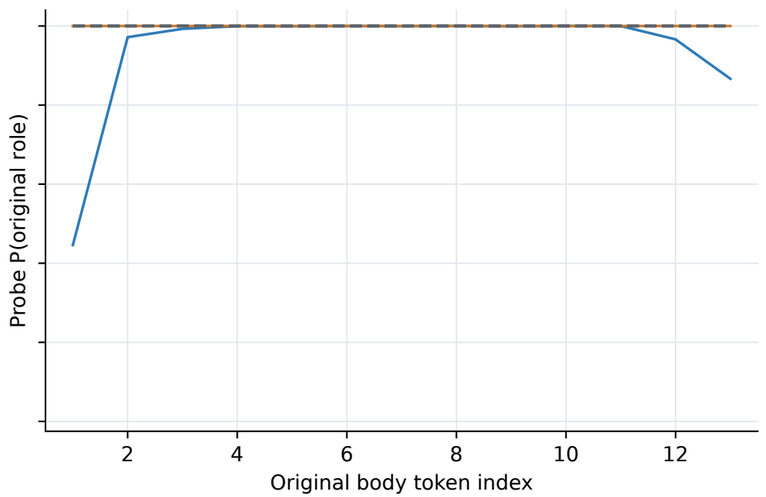
CoT · 67 body tokens

Means: original 100.0% | removed 98.5% | moved 100.0%



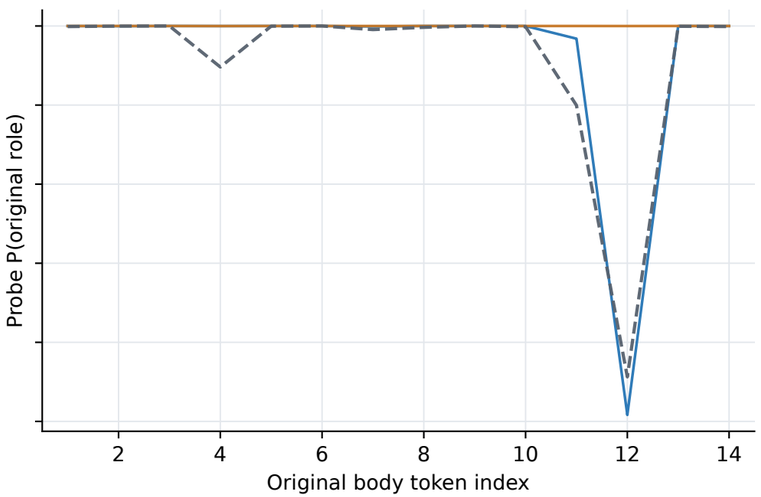
Assistant · 13 body tokens

Means: original 100.0% | removed 94.2% | moved 100.0%



Tool · 14 body tokens

Means: original 91.4% | removed 92.7% | moved 100.0%



The same body tokens are aligned by their original token order; wrappers are excluded. No smoothing or confidence intervals.
Only the first block of each role is changed. Moving a block changes its causal context as well as its position.
